

FEDERAL (DOT) TESTS - POSITIVE FOR HYDROCODONE OR OXYCODONE ONLY

During your interview with the MRO, it was determined that you have a prescription for either hydrocodone or oxycodone. These medications are known to pose a significant safety risk.

As per DOT regulations, you will have up to five business days to have your prescribing physician contact the MRO. You are responsible for facilitating the contact between the MRO and your prescribing physician. Your prescribing physician should be willing to state in writing to the MRO that you can safely perform your safety-sensitive functions while taking the medication, or consider changing your medication to one that does not make you medically unqualified or does not pose a significant safety risk. If you hold a CDL license, a copy of the most recent CDL Medical Exam Report documenting disclosure of your medication will be required in lieu of the physician statement.

This letter or CDL medical exam may be faxed or emailed to our office. **Again, It will be your responsibility for facilitating the contact between the MRO and your prescribing physician stating that you can safely perform your safety-sensitive functions while taking the medication.** You may check the status of your result to confirm contact or receipt of the letter on our website – www.imtmro.com, click on Prescription/Note Lookup on the left side of the page. You will need your specimen ID number found on your chain of custody form to be able to search for your status.

You may also call the office to confirm receipt, in so doing; you do not need to speak with the MRO but may speak with one of our assistants.

The office Fax number is 941-926-6097

The office phone is 941-753-9199

Our Rx email is rx@imtmro.com
